VR® PROTECTIVE WEAR
POLYWEAR® DISPOSABLE GOWNS
POLYWOG™ WIPES

COMPLETE PRODUCT CATALOG

Our History

In the 1960's, the pioneering Smith family began manufacturing one-of-a kind plastic reusable and disposable film solutions designed to protect people in the most challenging industrial and controlled environments. Today the family business—known as PolyCo—forges ahead with new technologies unlike any on the market to date.

Our Mission

Our mission is to provide customers with innovative products and methods that offer the greatest value, quality and service, and to do so with professional integrity and an uncompromising commitment to continuous improvement. PolyCo accepts the challenge of this mission and of future commitments to excellence knowing that achievement will contribute to the growth and success of our customers, employees, company and to the communities which we serve.

Our Vision

With our mission in mind, PolyCo continues to pioneer with innovative solutions and new Protective Wear that can contend with the challenges presented in the diversity of environments in today's world. In this catalog, new products that are being introduced for the first time include the VR® Jumpsuit, the VR® Thigh-High Boots, along with the VR® Heavy Duty Adjustable Strap and Grommet Aprons. In addition, both VR® and PolyWear® Gowns are now offered in a wider choice of colors than ever before. All of these innovative solutions are in response to certain applications with specific needs.

Our Guarantee

Your total satisfaction. In addition, our products are:

- Recyclable
- No polyvinyl chloride materials
- No latex
- Made in the USA

What is VR®?

In an effort to meet growing customer needs for a better and safer protective solution, PolyCo teamed up with film chemistry and engineering experts to replace PVC (polyvinyl chloride, or vinyl) and other limited-use protective wear. This extensive, collaborative research produced a material combining new age plastic resins with modern extrusion techniques. The result: exceptional quality, cost effectiveness, and superior comfort and safety. VR® is a trademark of and proprietary film product manufactured exclusively by PolyCo.

VR® Advantages

VR® Quality Performance

- Superior tensile strength, puncture resistance and elongation
- Excellent resistance to fats, oils and a broad range of chemicals
- Crack and tear resistant in cold work environments

VR® Exceptional Cost Savings

- Longer wearing. 4–6 times the average life of vinyl
- Disposal costs up to 50% less
- Greater recycling cost benefits

VR® Superior Comfort & Safety

- Better comfort, lighter weight
- Odorless and non-toxic
- Approved for direct food contact
- Flexible design and coverage options
- Easily recycled, safely land-filled or incinerated

Why choose VR®?

All VR® easy-to-clean, reusable products deliver superior cold-temperature resistance, puncture resistance and a more ergonomically comfortable design with its 30% lighter weight construction over vinyl of the same thickness. In fact, 6 mil thick VR® outperforms 8 mil vinyl and weighs up to 50% less. Bottom line, you save more and worry less with VR®. In compliance with the OSHA Bloodborne Pathogen Standards, Part 1910.1030, VR® disposable products provide Level D splash protection. When properly used under normal conditions, VR® does not permit toxic chemicals, blood or other potentially infectious materials to pass through to employees. Furthermore, the University of Illinois School of Chemical Sciences confirmed VR® chemical resistance and accidental exposure protection against industrial concentrations of hydrofluoric, hydrochloric, sulfuric, and nitric acids. VR® has 4–6 times longer wear life over vinyl. Vinyl products tend to tear and crack, however PolyCo VR® contains no plasticizers making it perfect for frequent use and repeated cleaning in oily and/or cold work environments.

Manufactured in the U.S.A.

Available in a wide variety of sizes and lengths.
 Available in blue, white, yellow or red.
 2 comfortable weights and the option of extra long, all guaranteed to ensure a perfect fit.
 Economical alternative for full frontal body protection.

Greater coverage for applications where the threat of biological or chemical contamination exists.

Thumb loop and elastic cuff design provides continuous protection between glove and sleeve.

Bulk packaging is standard. Cleanroom-packaging (for critical environments) is available.

Alternate packaging options are available, including individual bagging.

Additional colors are available in 50-case minimum quantity orders. Contact your sales representative to request a quotation.

"We are now putting these VR Gowns on all of our production employee's due to the excellent chemical protection that these gowns offer"
 ~ International Electronic Device Manufacturer

	42984	4 mil	● Yellow	50 bulk	37 lbs.
	42986	4 mil	● Green	50 bulk	37 lbs.

Green available only in extra long.

Specially designed for protection against harsh chemicals such as sulfuric acid.

The catch trough in the hem at the bottom of the bib is designed to collect any rundown of fluids on the front of the gown into the seamless hem. The collected fluids are allowed to drain out at the corner drain holes on either side preventing frontal roll-off onto the feet and toes.

The adjustable ties at the neck allow for a secure, close-around-the-neck fit providing the highest neckline possible.

Elastic cuffs provide a secure fit at the wrists.

Open back design allows for air circulation and venting.

Available in 4 sizes (S, M, L & XL).

Each Gown is individually bagged and packed in a poly bag lined case.

Alternate packaging options are available. Cleanroom-packaging (for critical environments) is also available.

Size	Stock No.	Material	Color	Case Pack	Case Wt.
Small 42" Length	43350	4 mil	● Blue	50 bulk	19 lbs.
Regular 45" Length	43450	4 mil	● Blue	50 bulk	19 lbs.
Large 50" Length	43550	4 mil	● Blue	50 bulk	21 lbs.
X Large 50" Length	43650	4 mil	● Blue	50 bulk	22 lbs.

Wrap-around hem on small & regular sizes

Partial wrap-around hem on large & extra-large sizes

High neckline tie for secure protection.

*"VR® Aprons are a great, lightweight alternative for our employees. Don't have to worry about chemical splashes."
~ Midwest Healthcare Device Manufacturer*

Economical and lightweight one-piece comfort construction. Eliminates separate ties to avoid contamination problems. Ideal for critical and controlled environments.

Available in blue, white, yellow or green. Additional colors are available in 50-case minimum quantity orders.

3 lengths provide optimum protection for every application.

Bulk packaging is standard. Cleanroom-packaging (for critical environments) is available.

Alternate packaging options are available, including individual bagging.

Polyester ties, 30"	89999	-	White	150/Bundle	1 lb.

Weighted bottom hemline available.

VR® HD Adjustable Strap Apron

Made of strong 12 mil VR® material.

Ergonomic, one-piece construction with easy-on/easy-off secure buckle for greater productivity.

Protection equal to 16-to-22 mil vinyl or other reinforced materials, but at a more comfortable, lighter weight.

Adjustable self-material neck strap.

Additional colors are available in minimum quantity orders. Contact your sales representative to request a quotation.

Size	Stock No.	Material	Color	Case Pack	Case Wt.
35" x 48"	47500	12 mil	● Blue	24 individually bagged	16 lbs.

Adjustable neck strap for added comfort.

Lightweight yet more durable than vinyl.
 Ideal for flexibility and product longevity.
 Strong, natural rubber elastic cuffs.
 Easy-to-clean and reuse.
 Textured inside surface minimizes cling and enhances ventilation static; smooth outside surface provides easier cleanup.
 Available in blue, white and yellow (clear available by special order).
 Two lengths and two widths deliver maximum protection and maximum productivity.
 Bulk packaging is standard. Cleanroom-packaging (for critical environments) is available.
 Alternate packaging options are available, including individual bagging.

"These VR® Sleeves performed better than anticipated within our biological application."
 ~ West Coast Tissue Bank

Unique fusion of a nitrile glove and a VR® 6 mil protective sleeve.
 Overall length of 28 inches provides complete durable hand and arm protection.
 Comfortably flexible with high tactile sensitivity.
 Elastic cuff allows for adjustable positioning on the upper arm.
 Resistant to a broad range of hazardous chemicals.
 Exceptional resistance to hydrofluoric, hydrochloric, sulfuric & nitric acids.
 Naturally low particle count, surface resistivity and good static dissipation.
 Meets or exceeds OSHA Level D chemical protective apparel requirements for splash protection.
 Strong, durable, lightweight, ergonomic and latex-free.
 Pairs are individually packed for quick and easy use.
 50 Series: Unlined glove, 11 mil thickness.
 60 Series: Unlined glove, 15 mil thickness.
 70 Series: Lined glove, 11 mil thickness.
 80 Series: Lined glove, 15 mil thickness.

White available by special order

VR® Shoe Covers

Made with gritty anti-slip VR® material for enhanced traction. Superior foot and shoe coverage with secure elastic top. Ideal for use where biological and chemical liquids are present. Two supple weights provide flexible, lightweight coverage.

Bulk packaging is standard. Cleanroom-packaging (for critical environments) is available.

Alternate packaging options are available, including individual bagging.

Size	Stock No.	Material	Color	Case Pack	Case Wt.

VR® Boot Shrouds

Knee-high lower leg protection. Guards against liquids and other materials from falling into tops of boots. Elastic top, 12 inch length provides optimum protection. Easy to clean and reuse.

Size	Stock No.	Material	Color	Case Pack	Case Wt.
Universal w/ Elastic Top	58100	4 mil	Blue	100 bulk (50 pair)	6 lbs.
	58104	4 mil	Yellow	100 bulk (50 pair)	6 lbs.

Continuous coverage from foot to high on the thigh for protection from fluids and contaminants.

Flexible 4 mil blue leggings bonded with double heat seals to our gritty anti-slip 4 mil clear Shoe Covers.

A full 34 inches long from the sole to the elastic top opening.

Elastic is encapsulated at the ankles and top securing the fit and preventing slide down.

Works comfortably when layered over scrubs or street clothes and under other protective outer wear.

Ideal for use where biological and chemical liquids are present.

One size fits all with elastic tops for height adjustment.

Bulk packaging is standard. Cleanroom-packaging (for critical environments) is available.

Alternate packaging options are available, including individually bagged.

"The VR product is tremendous because it is so much more flexible than the usual PVC products."

~ Midwest Semi-Conductor Manufacturer

Anti-Slip Texture with VR® Footwear Products

Detail of anti-slip texture.

When developing our protective footwear products, special attention was given to traction in wet environments. Many solutions to the problem were considered, including treads, rubber coatings and solid additives.

Our solution maintains the integrity of the VR® barrier by using a special fabrication method that provides texture to the product without the need for additional materials. The texture we've integrated into our barrier material is akin to the adhesive traction strips found on exterior walkways around the world.

Many users turn the texture to the inside—against the sole of the shoe or boot—for best traction in slippery environments. This gives the sole of the shoe a firm grip on the VR® footwear. Others use it with the texture on the outside depending on footwear and flooring surface conditions.

Continuous coverage combines the upper body protection of a short sleeve Gown with the lower body protection of our Thigh High Boots.

Flexible one-piece 4 mil blue short-sleeve upper body with leggings is bonded with double heat seals to our gritty anti-slip 4 mil clear Shoe Covers.

Open-back design allows for air circulation and ventilation for cooler protection.

Short sleeve design provides a comfortable fit reducing pull-down tension around the neck.

One size fits all with an adjustable neck and waist straps for custom fitting.

Elastic is encapsulated at the ankles securing the fit and preventing slide down.

Works comfortably when layered over scrubs or street clothes and under other protective outer wear.

Ideal for use where biological and chemical liquids are present.

Individually bagged for distribution and easy use.

Cleanroom packaging (for critical environments) is available.

Size	Stock No.	Material	Color	Case Pack	Case Wt.
Universal	44550	4 mil	● Blue	25 Individually Bagged	14 lbs.

Open-back design provides excellent ventilation.

Unique design with shoulder & waist ties provide a secure fit.

Comfort-fit design with oversized snaps for quick donning and doffing.

Available with all of the same features of the rainwear jacket.

Extra long 50" length provides neck to below-the-knee protection.

Additional Colors are available in minimum quantity orders. Contact your sales representative for more information.

Size	Stock No	Material	Color	Case Pack	Case Wt.
Extra Large	56624	8 mil	Yellow	12 (individually bagged)	17 lbs.

Large snaps with storm flap

Reinforced construction

Naturally soft and lightweight.

Available with and without attached hood.

3-piece construction; jacket with storm flap; adjustable, quick-release elastic overalls.

Comfort-fit design with oversized snaps for quick donning and doffing.

Impervious to fats and oils; resistant to a broad range of acids and chemicals.

Odorless, nontoxic, easy-to-clean and disinfect.

Cold-crack and tear-resistant.

Available with and without hood.

PolyWog Wipes	31300	300 wipes/bucket	4 Buckets/case	49 lbs.
PolyWog Refill	31310	300 wipes/bag	2 Bags/case	19 lbs.

When Using PolyWog™ Wipes:

PolyWog Wipes can be used for wiping down any VR Protective Wear product and cleaning away any build-up of dirt and residue. PolyWog Wipes cut through grease and oils easily with no rinsing required, leaving no residues behind. Evaporation time of the no-fragrance solution is just 60 seconds and the item is ready for reuse. PolyWog Wipes also work great when used to clean tools and nonporous work surfaces, especially stainless steel.

PolyWog Wipes were specifically developed in response to requests from many small to medium processors without in-house laundering capabilities. Special attention was given to four objectives:

- 1) Cleaning could be done without the presence of water or the need for rinsing.
- 2) Quick drying.
- 2) Efficiently removes proteins, grease and oils.
- 3) An unscented solution that emits no fragrance during and after cleaning.

PolyWog Wipes successfully fulfills all four of these objectives having been tried and true for over 15 years.

PolyWear®

Available in eight popular colors.

In compliance with FDA requirements and tested in accordance with ASTM standards including breaking load, tensile strength and elongation.

In compliance with OSHA Bloodborne Pathogen Standard (1910.1030).

FDA 510(k) Clearance No. K925077 Isolation Gowns.

FDA 510(k) Clearance No. K230384 PolyWear Personal Protective Level 3.

Superior physical properties over imports.

Easy tear-away feature for quick gown removal and safe disposal.

Contoured thumb loops secure gown sleeve for added protection.

Proprietary design redirects stress to the film material not to the thermal seals.

Full-length open back affords better comfort and shoulder coverage.

Provides liquid and aerosol blood resistance.

Lightweight, lintless construction.

Additional colors are available in 50-case minimum quantity orders. Contact your sales representative for more information.

Extendable back ties for best fit

"PolyWear® Gowns were a great surprise for our vets regarding the ease of putting them on and the disposable protection they offered"
 ~ Southeast Equestrian Hospital

VR® Barrier Products for the Health Care Environment

For over twenty-five years VR® Protective Wear has proven itself as a viable alternative to vinyl and a variety of other materials that have been traditionally used in a multitude of industries. With the introduction of the VR® Sleeve Glove over five years ago the popularity of VR® products in the Healthcare environment has steadily increased. The Healthcare industry's awareness of VR's lightweight comfort and strength is just beginning to take hold and the demand continues to grow for VR® Gowns, Sleeves, Aprons and Foot Wear. New to the list are the introduction of the Thigh High Boots and the Jump Suit.

VR® material offers strong, impervious protection to fluids and pathogens as well as many chemicals. It has earned its place as a comfortable solution to many applications in and around the Healthcare workplace that require protection from contaminants.

Innovative VR® protective wear is used throughout many healthcare facilities such as:

- Sterile Processing (SPD)
- Surgery (OR)
- Environmental Services (EVS)
- Emergency (ER)
- Obstetrics and Gynecology (OB-GYN)
- Housekeeping
- Chemo
- Intensive Care Unit (ICU)
- Lab
- Burn Unit
- Nutrition and Dietetics
- Critical Care
- Maintenance Engineering
- Bio Med

Physical Properties

Independent physical performance tests prove that VR® is superior to vinyl. The chart below compares a 6 mil VR® material to a heavier 8 mil vinyl material, demonstrating conclusively that VR® material outperforms vinyl in all categories.

VR® has superior puncture resistance compared to vinyl.

Biological Contaminant Resistance

Personal protective clothing made from VR® film material offers a natural non-stiffening resistance to animal fat and fat-containing fluids. VR® has a unique lustrous finish that is easy to clean for reuse. Fats, oils and other biological contaminants can be easily removed by wiping with a damp cloth, or by washing or rinsing at water temperatures no higher than 180° F. A liquid washing detergent is most effective as a degreasing and cleaning agent. Regular sanitizing procedures using standard chlorine bleaching agents are recommended for cleaning and decontaminating VR® products. After cleaning, VR® products can be hung to drip dry in ambient temperatures or put into a machine dryer that has an air (cool) cycle—heat cycles should not be used and are not recommended.

Chemical Contaminants

In comparative independent lab tests, VR® has been proven to be equal or superior to PVC (vinyl) and other alternative materials in chemical resistance—confirming exceptional chemical resistance of VR® to industrial concentrations of hydrofluoric, hydrochloric, sulfuric, and nitric acids under ambient conditions. The lab tests demonstrated that VR® Protective Wear provides excellent protection against accidental exposure or direct contact with hazardous chemicals. Tests were conducted with VR® and vinyl over a 24-hour period. VR® material tested in 4 to 12 mil thickness did not suffer any catastrophic failure (liquid penetration). Vinyl protective wear tested at the same time suffered catastrophic failure when exposed to sulfuric acid.

Sample test with sulphuric acid on vinyl and VR®.

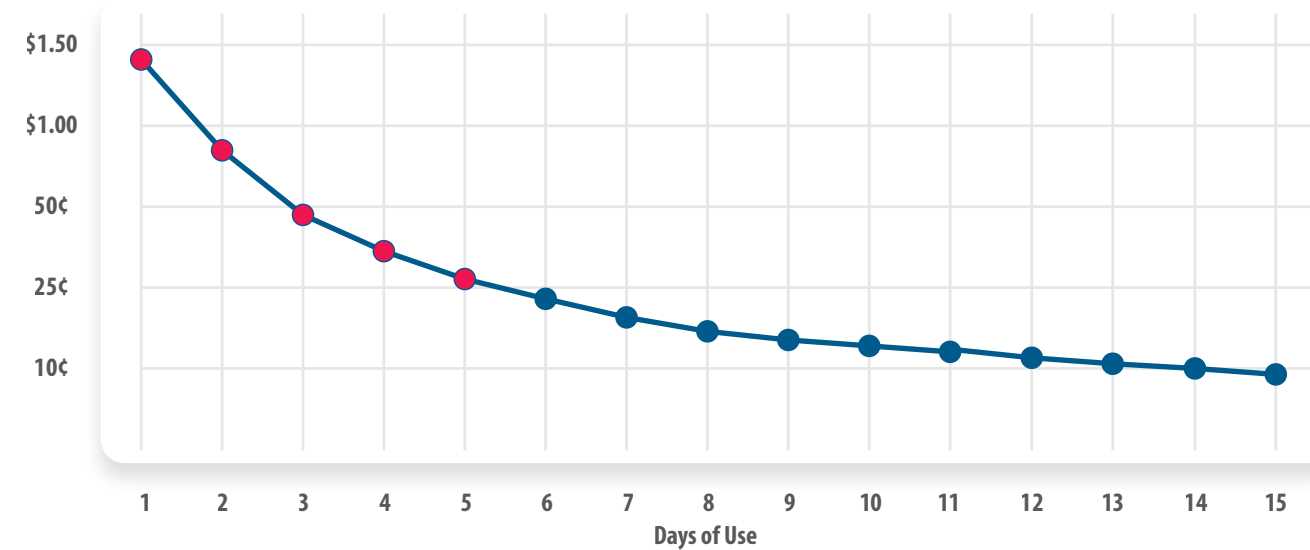

Under the current ANSI (American National Standards Institute) Standard for governing performance requirements for protective clothing, VR® Protective Wear is classified as Partial Body Chemical Protective Clothing. The ANSI prescribed tests are for much shorter periods of exposure than the tests conducted by the independent laboratory performing the tests of VR® Protective Wear. VR® and vinyl were also tested for relative resistance to vapor transmission. VR® was superior to vinyl in vapor transmission resistance. In exposure to sulfuric acid, VR® revealed no evidence of vapor transmission over a 24-hour observation period while vinyl had a catastrophic failure in less than 17 hours.

Contact PolyCo for more information about specific chemical contamination resistance.

Climate Controlled Work Environment

VR® film material is especially adapted to cold temperature controlled work environments. VR® material remains soft and supple even at temperatures well below freezing. VR® does not degrade, cold-crack, or become brittle from low temperature use or from exposure to fat, oils, and fat-containing fluids.

Daily Apron Cost

Initial cost of apron: \$1.40 each
 ● Average wear life of PVC apron: 5 days
 ● Average wear life of VR® apron: 15 days
 Users report average wear life of VR® aprons to be 2x to 6x longer than PVC aprons when used with normal cleaning & handling.

Weight Comparison:

Softness Comparison:

VR® weighs 30% less than vinyl.

Softness & Weight

In comparative independent lab tests, VR® has been proven to be softer than vinyl (see chart above). By weight comparison of both VR® and vinyl, the same quantity of both materials show VR® to be 30% lighter than vinyl. A softer feel and lighter weight make VR® a more comfortable product to wear for long periods of time over vinyl.

Wear Life

The wearing life and reusability of a personal protective garment is essential to many applications. End users nationwide have documented that VR® is more durable than vinyl and many other traditional materials. As the Apron Wear Life Comparison Chart (at the right) illustrates, a cost savings of over 65% a day can be achieved by replacing vinyl with VR®. In this study, VR® and vinyl aprons are assumed to be equal in cost with the wear life of vinyl limited to five days and the wear life of VR® lasting up to 15 days. The cost of vinyl and VR® remains level at 28¢ a day through the first five days with the cost of VR® declining significantly to 9.4¢ a day.

Disposal Cost

In analyzing the cost benefits of replacing vinyl with VR®, attention must be given to the cost-avoidance or waste collection savings achieved from VR®'s extended wear life. VR®'s lighter weight (up to 50% less than comparable vinyl) provides additional savings in annual waste disposal costs. For example: A plant has 500 employees each wearing one grommeted 8 mil 45" vinyl apron per week for a total usage of 25,000 vinyl aprons. The plant replaces these vinyl aprons with grommeted 6 mil 45" VR® aprons and as a result now uses only 8,333 VR® aprons annually. With the VR® replacement, the plant's total annual apron disposal cost has been greatly reduced.

Recycling Cost Benefit

VR® is derived from polyolefin plastomer resins that incorporate a new metallocene catalyst technology. Exhibiting very attractive recycling properties, VR® can be blended by most poly film extrusion companies. VR® waste material that is clean and unadulterated (no foreign materials present) commands a premium price from recyclers and film re-processors. The strong bonding and reprocessing qualities of VR® make for excellent recyclability. For example, using the previous illustration, a plant replacing 25,000 vinyl aprons a year with 8,333 VR® aprons can recapture approximately \$325.00 (at 15¢/lb.) of the VR® apron cost through a recycling program. Note: These are estimated gross recycling revenues that would contribute to a plant-wide recycling program. Contact PolyCo for more information and guidance in developing a recycling program.

Comfort and Protection

The wearing of VR® personal protective clothing enhances compliance with emerging OSHA ergonomic standards and guidelines. The softness and lighter weight of VR® contributes to better wearing comfort for the employee during the course of a long work day. Better comfort means that employees will be more attentive to quality and productivity, translating into an economic gain for employers. VR® is odorless and non-toxic. Unlike traditional vinyl, which contains carcinogenic plasticizers that can migrate resulting in material brittleness and surface degradation, VR® is chemically inert and remains stable under conditions of reuse. The innovative design and variety of VR® personal protective wear provides customers with a broad choice of coverage and protection. For optimum comfort, protection and value, VR® is available in many variations of protection as shown in this catalog.

Environmental Safety

PolyCo certifies that VR® personal protective clothing film is approved for direct food contact according to the FDA's Code of Federal Regulations (21CFR175.300) and is formulated in compliance with the appropriate food additive regulations and guidelines of the USDA for use in direct, prolonged contact with food, meat or poultry products. VR® contains no toxic substances or plasticizers and can be safely land-filled or incinerated with no harm to the environment. If incinerated, VR® product waste emits only nontoxic carbon dioxide and water. Field test comparisons conducted by end users have proven conclusively that VR® Protective Wear is more user friendly—employees enjoy the lighter weight and brilliance of VR® colors. End users have also discovered that VR® is easier to clean and actually gets softer while retaining its strength after repeated uses. USDA's HACCP rule includes hygiene requirements related to personal protection apparel. "Reusable disposable items with obvious wear will have to be changed more often." Under OSHA standard 1910.132, personal protective equipment should be used when hazards to processes or environment, chemical hazards, radiological hazards, or mechanical irritants are encountered in a manner capable of causing injury or impairment to employees through absorption, inhalation, or physical contact. Under these standards, employers are required to analyze their work practices to determine if hazards are present, or are likely to be present, that will necessitate the use of personal protective equipment. Under 1910.132, OSHA also mandates that defective or damaged PPE shall not be used. Reuse of personal protective clothing that becomes brittle and suffers surface alteration after several washes and rinses could potentially violate this OSHA mandate.

VR® Markets

VR® has proven to be a superior replacement for traditional protective apparel used in industries where biological, chemical, and other contaminants pose a significant danger to employees and manufactured products.

Food Processing

VR® Aprons, Sleeves and Gowns have become increasingly popular as cost-effective replacements for traditional vinyl protective apparel in the Food Processing Industry:

- Red Meat & Poultry
- Fisheries & Seafood
- Sausage Makers
- Dairy Operations
- Produce "Further Processors"
- Confectioners
- Beverage Producers

Historically, vinyl aprons, sleeves, and coat aprons (gowns) used for employee protection have demonstrated limited wear life due to the erosion of the vinyl's plasticizers (softening agents). This erosion is caused by one or more of the following reasons:

- a) Frequent Use where the vinyl garment is continually exposed to animal fats and oils;
- b) Repeated Cleaning or Washing; and
- c) Tearing and Cracking from cold work environments.

Since VR® Protective Wear Aprons, Sleeves, and Gowns do not contain plasticizers, their wear life is 3-10 times that of vinyl. This is important to the Food Processing Industry where frequent use and repeated cleaning of protective wear is usual and customary. Another advantage of VR® in the Food Processing Industry is VR®'s lighter weight and softness. Since laboratory studies of VR®'s physical properties have revealed the superiority of VR® to vinyl in strength and durability, VR®'s popularity as a vinyl replacement has continued to grow (4 mil VR® is equal to 6 mil vinyl and 6 mil VR® is equal to 8 mil vinyl). The lighter weight is more comfortable and is less noticeable to the employee during a long workday.

Critical & Controlled Environments

VR® Die-Cut Aprons, Gowns, Sleeves, Boots and Sleeve Gloves are especially adaptable to the protective requirements of critical environments:

- Semiconductor Chip Manufacturing
- Pharmaceutical Laboratories and Manufacturing
- Aerospace Cleanrooms
- Food/Biotech Cleanroom Environments
- Nuclear Waste Disposal

In Particle and Electrostatic Discharge Controlled Environments where chemical resistance of impervious garments is essential, VR® has proven to be superior to traditional vinyl garments. For example, semiconductor cleanrooms work with acid chemicals that pose a significant danger to employees not properly protected with quality, chemical-resistant protective wear. Because of its exceptional chemical resistance, low particle count, and surface resistivity, VR® protective apparel is rapidly becoming the product of choice in the semiconductor industry. Contact PolyCo for specific data regarding particle and resistivity levels of typical cleanroom packaged VR® Protective Wear. In critical environments where low-temperature climate control is important, VR® excels with its cold crack resistance. Unlike vinyl, VR®'s softness and durability is not compromised by low temperature work environments and continues to provide comfortable protective wear even in the coldest operating temperatures. With VR®'s low attraction to radioactive particles, Nuclear Power Plant facilities favor the use of VR® Boots and Gowns over vinyl protective wear in the handling and management of radioactive contaminated materials.

Healthcare

VR® is specified as a durable barrier requirement in Critical Environments where there is the potential for biological contamination from bloodborne pathogens. VR® Protective Gowns, Sleeve Gloves, Aprons, Boots, and Sleeves are used in Hospital Sterile Processing, Central Services, Clinical Laboratories, Outpatient, Surgical and other hospital critical care departments.

Manufacturing

Because of the exceptional physical and design attributes of VR® Protective Wear, product manufacturers seeking improved personal protection for their employees from chemical exposure and other toxic and nontoxic contaminants are pleased with the cost-effective performance of VR® compared to other personal protective garments. The ease of cleaning, strength, durability, lightweight comfort, and low price of VR® Protective Wear are attributes that manufacturers and processors prefer or require when specifying employee personal protection. From Automotive to Waste Processing, industries throughout the world are recognizing that VR® Protective Wear is in a class by itself.

VR® Custom Products

VR® is a proprietary material of PolyConversions, Inc., and is being developed into many products formerly dominated by PVC (vinyl) and other materials.

The Many Advantages of VR®

- Puncture Resistance
- Tear Resistance
- Tensile Strength
- Elongation
- Natural Softness
- Recyclability

All make for a replacement material of choice in an age where environmental and ergonomic concerns, combined with long-lasting cost-effectiveness are paramount in new product design.

Our Facility

The growing demand for VR and PolyWear Personal Protective Wear has led PolyCo to expand and relocate its operations to a new modern plant facility located in Champaign, Illinois. With this move and the addition of new production lines and state-of-the-art manufacturing equipment, we have been able to accommodate the increasing demand from the food processing, industrial, and medical markets for personal protective wear made in the USA. As industry demand for PolyCo's personal protective wear continues to grow, we are prepared to respond through additional expansion and improvements to our production capacity.

Our Quality Control

As an FDA registered facility, PolyCo has incorporated in its operations a quality system standard that reflects that high level of control and oversight required of FDA Class 2 product manufacturers. Quality is maintained through constant testing and performance validation of product in both raw and finished form. Utilizing advanced MRP software and statistical process control we continually monitor these high regulatory standards. Pride in workmanship and exceptional quality has been a tradition since PolyCo was founded in 1993.
